BREAKSHARK · COMPETITIVE CASE STUDY · JULY 2026

THE $65,000 QUESTION

What is a bar's commercial-break time actually worth — and who should keep it? Our biggest competitor already answered it for us, in their own published case study.

THE COMPETITOR'S OWN NUMBERS

Taiv (taiv.tv) is the largest "free TV ad box" network in the country — 6,000+ venues, 25,000+ screens. Their model: a free box detects commercial breaks and swaps in ads *Taiv sells* to national brands, sportsbooks, and local businesses. The venue's own specials get mixed into the rotation, and the venue receives a 15% revenue share — **$1,000–$2,000 per year**, by Taiv's own published figures.

Taiv's flagship venue case study (Fionn MacCool's, a four-location Irish pub group) measured what happened when the pubs' screens started promoting *their own* menu and events during breaks:

+6.5%

Lift in total food & drink sales

+14.8%

Lift in Guinness pours (single promoted item)

+70%

More turnout at their promoted Valentine's event

Read that again: the lift came from the venue's *own* promos — and those promos only got **part** of each break, because Taiv's business depends on selling the rest of the time to third-party advertisers. Self-promotion is the proven value driver; the ad network is what's diluting it.

WHAT THE BREAK IS WORTH: SELF-PROMOTION VS. AD-SHARE CRUMBS

VENUE ANNUAL REVENUE	6.5% LIFT (THEIR CASE STUDY)	CONSERVATIVE 1% LIFT	TAIV'S PAYOUT TO THE VENUE
$500K	**$32,500 / yr**	**$5,000 / yr**	~$1–2K / yr
$1M	**$65,000 / yr**	**$10,000 / yr**	~$1–2K / yr
$2M	**$130,000 / yr**	**$20,000 / yr**	~$1–2K / yr

At the case-study lift rate, a venue's break time is worth roughly **30–60× more** selling its own inventory than rented out as ad space. Even at a conservative 1% lift, a $1M venue clears BreakShark's Full Bar price ($2,388/yr) more than **4× over**.

THE SLOT MATH: TAIV CHARGES VENUES TO BUY BACK THEIR OWN BREAKS

Taiv's enterprise pricing (taiv.tv/enterprise/bars-restaurants, July 2026) divides each commercial break into six ad slots:

TAIV TIER	VENUE'S SHARE OF ITS OWN BREAK	COST TO VENUE
Free	1 of 6 slots — Taiv sells the other five	Free (15% rev share back)
Premium	3 of 6 slots	Paid — "contact us"
Enterprise	All 6 slots + media sales rights	

TAIV TIER	VENUE'S SHARE OF ITS OWN BREAK	COST TO VENUE
		Paid — chains/groups only
BreakShark	**All 6 slots, every venue, day one**	**$99–$199/mo, self-serve**

This is the model validation: the incumbent's own pricing ladder proves venues will *pay* to own their break time — and proves the incumbent only sells 100% ownership to multi-location chains through an enterprise sales process. The single-location independent — the vast majority of America's ~70,000 bars — is structurally unserved. That is BreakShark's customer.

THE PER-SLOT MATH: ONE SLOT IS WORTH 3–5% — WE HAND OVER ALL SIX

The slot ladder above isn't just a pricing story — the incumbent's own CEO has put a *sales number* on a single slot. In a public Marketecture "Justify Your Existence" interview, Taiv's CEO states that the **one** house-ad slot a bar gets (of six) lifts that venue's sales **3–5%**. Read that as an operator or an investor: on the free plan, the proven value engine — the venue promoting itself — is running at **one-sixth throttle** and still moves the register 3–5%.

SLOTS RUNNING THE VENUE'S OWN PROMOS	WHO THAT DESCRIBES	MEASURED / STATED SELF-PROMO LIFT
1 of 6	Free plan — the incumbent's own example	3–5% (their CEO, on camera)
More than 1 of 6	Their fullest published venue case study (Fionn MacCool's)	**6.5% food & drink**

SLOTS RUNNING THE VENUE'S OWN PROMOS	WHO THAT DESCRIBES	MEASURED / STATED SELF-PROMO LIFT
All 6 of 6	**BreakShark — every venue, day one**	**The whole engine — 6.5% is their measured floor, not a ceiling**

The granular point: if a *single* slot of self-promotion is worth 3–5%, then the argument for owning all six isn't incremental — it's the difference between renting out five-sixths of your most valuable seconds and putting **every** one of them to work on your own menu. The incumbent proved the per-slot value and then priced the full slate out of reach for the independent venue. BreakShark gives that venue all six slots for $199/mo flat.

Stated honestly: the 3–5% figure is the competitor's CEO describing a single house-ad slot; the 6.5% is their published multi-slot venue result. We do *not* claim 6 × 3–5%. The point is directional and conservative: their own measured full-self-promo result (6.5%) is the floor of what all six slots can do, and BreakShark is the only way to run all six without an enterprise contract.

WHY TAIV CAN'T MATCH US — STRUCTURALLY

TAIV — AD NETWORK

- Customer = the advertiser. The venue is inventory; the patrons are reach.
- Revenue = selling the venue's break time to third parties.
- Venue promos are the sweetener — every second given to the venue is a second Taiv can't sell.
- Giving venues 100% of break time would eliminate Taiv's revenue. They cannot follow us here.

BREAKSHARK — VENUE TOOL

- Customer = the venue. Simple SaaS: $99–$199/mo + box. No ad-sales army needed.
- 100% of every break sells the venue's own menu, events, and specials.
- No national beverage or sportsbook ads the owner didn't choose on their screens.
- Dashboard tracks takeovers and recaptured value — aligned incentives, full stop.
